

The local and global network for sharing observations at sea, on the coast and land

SeeOnSea makes available to the general public and professionals a range of IT products and services entirely dedicated to sharing observations at sea, on the coast and on trails.

Imagine a map on which Observations are easily shared with the precision of a GPS. Sharing is instantaneous, taking into account the level of protection of the species.

The iOS, Android and web apps are free for the general public.

Observations are of 5 types: fauna, flora, natural events, human footprint, remarkable sites. They can even be created directly on your website.

« Better understand your environment to better protect it »

### Success story :

Our partner AILERONS did it,  
join us!

<https://www.asso-ailerons.fr/carte-des-observations/>

The AILERONS association works to improve knowledge and protect Mediterranean rays and sharks.

Working with SeeOnSea, AILERONS has set up an interactive map on their web platform.

# Everything is possible!
